

THE GREATEST NEUTRAL INTERCONNECTED PLATFORM IN SPAIN & PORTUGAL

The true Digital Transformation of a company depends on how it is properly interconnected with its environment. And the best allies of any type of company to get the best connectivity solutions are the Network Neutral Data Centers, infrastructures that have begun to play an essential role in the way organizations connect with their employees, partners and customers within a digital ecosystem.

Itconic offers its clients the largest Iberian Network Neutral Data Centers platform:

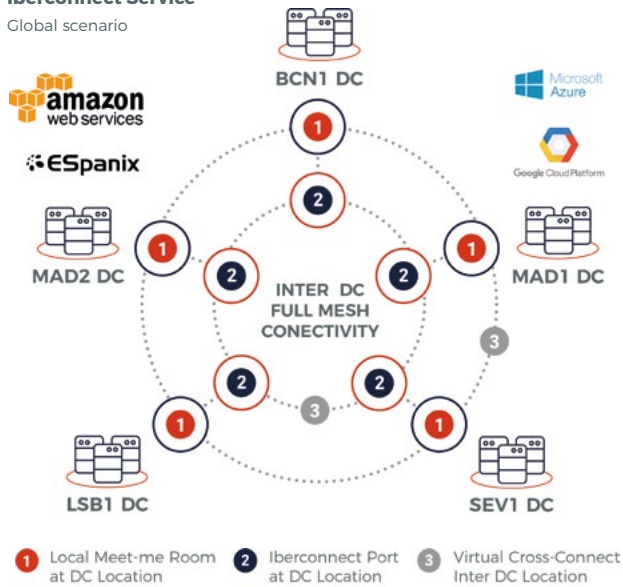

- Five interconnected Data Centers - Madrid1, Madrid2, Barcelona, Seville and Lisbon - operating as a single platform.
- Connected to the main Telecom Carriers, Public Cloud Providers and IXPs in the Iberian Peninsula.
- A Data Centers network sitting on top of the main terrestrial fiber routes and submarine cable landing points, and standing out as Spain & Portugal's largest connectivity hub.

Through Itconic, your company can connect with the rest of the world in the most efficient and flexible possible way.

Iber-Connect Service leverages Itconic's SDN-based network to interconnect your business across all the Itconic Data Centers to handle the specific requirements of your current and future connectivity needs. It allows clients to Cross-Connect seamlessly to a rich ecosystem of business partners with presence in Iberia. Your pre-installed infrastructure, cabled to the Data Centers' Meet-Me-Rooms, enables direct, low-latency connections.

Iberconnect Service

Global scenario

Through this service the local Cross-Connect interconnection model is extended allowing new powerful use cases:

1 USE CASES

Service Providers to Client

Service Providers can now interconnect directly with any client hosted in any of our Data Centers in a secure and flexible manner.

Intra-Client

Enterprise connectivity between sites to extend connectivity or replicate services.

Inter-Client

Extend and deploy easily your network and peering with a third party across our footprint.

2 AVAILABLE FEATURES AND SERVICE CAPABILITIES

- › Private direct connection between Iber-Connect ports. Physically and logically isolated from one client to another and tunneled between Itconic locations.
- › Low latency and transparent Ethernet traffic transport between Itconic Data Centers.
- › Protocol-Agnostic and transparent application service.
- › High availability service based on a full mesh connectivity between Itconic Data Centers.
- › Rich connectivity offering, including Fast Ethernet, Gigabit Ethernet and 10 Gigabit Ethernet ports.

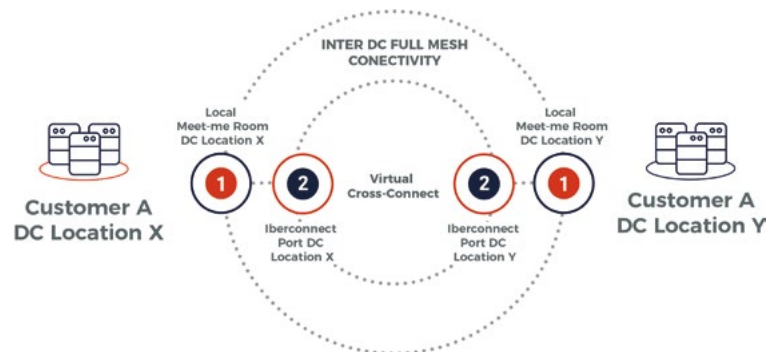

3 CONFIGURATIONS

Standard Architecture

- › Standard architecture suits most client needs and it has the best cost-performance-reliability ratio.
- › Delivered through a virtual Ethernet Connection - one Iber-Connect port at each location.
- › Connectivity between Itconic Data Centers are fully redundant and protected through multiple routes and providers between sites.

Iberconnect Service

Standard architecture

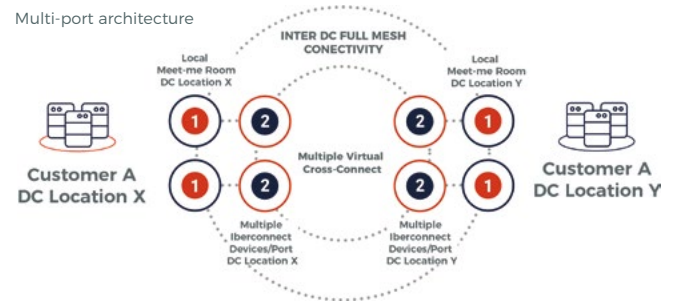

Multi-port Achitecture

- › Clients with **extra resiliency needs** can hire the advanced multi-port architecture. Service is delivered through **dual (2) virtual Ethernet Connections** based on two Iber-Connect ports at each location.
- › Iber-Connect ports are provided in a diverse active-active configuration with no single point of failure.
- › **Connectivity** between Itconic Data Centers are fully redundant and protected through multiple paths and multiple providers between sites.

Iberconnect Service

Multi-port architecture

BENEFITS

- **Simple and smooth:** Asking for a new Iber-Connect port is as easy as asking for a traditional Cross-Connect.
- **Ubiquitous:** Iber-Connect allows clients to connect with other companies and providers, regardless in which Itconic Data Center they are hosted.
- **Reliable:** This new service improves availability thanks to a redundant service of mesh networking between Data Centers.
- **Adjusted Prices:** Companies can optimize and reduce their operational costs thanks to the service efficiency.
- **Quick Deployment:** Iber-Connect is installed in just 1 day.
- **Flexible monthly contract:** Clients may request, modify and deactivate dynamically this service depending on their operational needs.

WHY ITCONIC

We get companies connected to the rest of the world with the most innovative technologies through the major interconnected Data Center Platform in Spain and Portugal.

We work to move forward the digital IT Transformation processes in Telcos, Cloud Providers, Organizations and Public Administrations.

Itconic provides a complete connectivity ecosystem and services portfolio - much more than a simple data storage. This great ecosystem of our Data Centers, Network and Services Providers, Neutral Exchange Points and Cloud Services Providers ensure companies the best connectivity.

A professional qualified IT team expert in consultancy, designing, building and IT infrastructure management offer an excellent customers service to increase the efficiency of our customer's communications and IT platforms.

CERTIFICATIONS

Itconic Data Centers are backed up by the main certifications of the market.

WE USE RENEWABLE ENERGY

100% of our Data Centers power come from renewable energy, contributing to reduce carbon footprint. Management and decision making in our company follows our Environmental Management System certified by ISO-14001.

ABOUT ITCONIC

Itconic is a global company for IT services, expert in the management of Neutral Data Centers and Cloud Management Services, with over 20 years of experience in Spain and Portugal.

The Spanish company allows its clients to efficiently improve their processes of digital transformation thanks to a multidisciplinary team of global storage management, migration to the cloud, maintenance and connectivity to ensure continuity and safety in its IT infrastructures, 24/7.

Furthermore, Itconic has the largest platform for Neutral Data Centers in the Iberian Peninsula so that their clients, in their five centers, are interconnected with the rest of the world; access the main telecommunication providers, Neutral Internet Traffic Exchange Points and hyperscale Cloud Providers.
